

Tindale-Oliver & Associates, Inc., (TOA) was contracted to the downtown parking issue by a developer interested in building the arena and a downtown hotel that would serve the arena. The initial inclination of community leaders was to look at the area surrounding the football stadium — outside of the downtown area.

Project Highlights

- The project team reached agreement with officials that there was ample access to the proposed arena site, that parking would be available once people arrived, and that sufficient pedestrian walkways were available to reach an event safely and quickly.

Project Issues

- During the day parking is difficult to find

Solutions Implemented

- Study results showed that during the day parking is difficult to find, but after business hours, when the arena would be in use, the parking facilities are extremely accessible.
- The TOA team recommended parking improvements and “event” traffic strategies that would improve traffic flow.

Study network.
