

2035 Long Range Transportation Plan Citrus County, Florida

Tindale-Oliver & Associates, Inc.
Planning and Engineering

As part of the development of the multi-modal Long Range Transportation Plan (LRTP), workshops were held to solicit feedback from interested parties on the Needs and Corridor Development portions of the LRTP. The multi-modal LRTP will affect all residents of Citrus County, so it was important that the public be given the opportunity to contribute to the plan.

Project Highlights

- Reviewed goals in order to help the County visualize what they would like to see in 2035
- Helped develop a needs plan and cost affordable plan
- Reviewed costs and revenues to determine County options

Project Issues

- How and where would we like to see the County grow
- Where transportation improvements in the County should be made
- How the corridors should look and feel

Solutions Implemented

- Held several geographic workshops and consensus-building workshops to discuss potential transportation improvements and to obtain feedback
- Used feedback, along with professional expertise and coordination with the client to guide the plan

Project Start and End: September 2008 to December 2009
TOA was Prime
Cost: \$206,296.26
